

Intelligent Digital (CAN-open) sensors and accessories for use with HPM Series meters and in generic CAN bus environments

All Intelligent Digital (ID) sensors use the CAN-open protocol that makes a plug-and-play system with the HPM meters. These sensors are compliant with the CAN-open standard and are fully supported for integration in third party systems.

There is a wide range of cables and connectors to suit all applications. The ID sensors are connected in-line with one another, by way of a Y cable, often resulting in shorter cable lengths.

The CT and CTR series of turbine flow meters, provide a complete solution to the flow and temperature measurement of hydraulic systems on test stands, machine tools and other fixed or mobile applications. The flow meter can be installed anywhere in the hydraulic circuit for production testing, commissioning, development testing and control systems. The compact design allows the flow meters to be installed where space is limited.

The integral loading valve built into the CTR series provides smooth progressive pressure control in both flow directions allowing components such as cylinders or motors to be tested without re-plumbing the test connections.

Make it **BLUE**

Features

- BI directional flowmeters operation.
- Flowmeters with loading valve have BI directional operation 'INTERPASS™' safety system, bypasses oil internally in the event of valve being over pressurised.
- Flowmeter temperature range of -20 to 90 °C, -4 to 194 °F.
- Pressure transducer temperature range of -25 to 105 °C, -13 to 221 °F.
- Pressure transducer housed in a stainless-steel body and are available in ranges up to 1000 bar, 14500 psi.

Flowmeters Specifications

Maximum Rated Pressure:	480 bar, 7000 psi
Maximum Flow:	750 L/min, 200 US gpm
Ambient Temperature Range:	-10 to 50°C, 14 to 122°F
Fluid Temperature Range:	-20 to 90°C, -4 to 194°F continuous use
Temperature display:	-25 to +125 °C (-13 to +257 °F).
Viscosity range:	10...100 cSt
Compatible Fluid:	Mineral oils to ISO 11158. Other fluids consult sales office.
Accuracy/Tolerances:	Reading 15% to 100% of flow range - 1% of indicated reading. Readings below 15% of full scale flow - fixed accuracy of 0.15% of full scale (CT15 is 1% of full scale). Temperature ± 2 °C
Repeatability:	Better than $\pm 0.2\%$
Filtration:	Oil cleanliness should be better than DIN ISO4406: 21/19/16 or NAS 10 (typically achieved with 20-20u filters). CT15; should be better than DIN ISO4406: 19/16/13 or NAS 7 (typically achieved with 10u filters or less).
Porting:	BSPP, SAE
Material:	
Flow Body:	600/750 High tensile Aluminium 2014A T6 60/150/300/400 High tensile Aluminium 2011 T6 15 High tensile Aluminium 6082 T6
Internal Materials:	Aluminium, Steel, Stainless Steel.
Transducer:	Body and nut - steel 212A42 electroless nickel plated Housing and Lid - Aluminium 2011 T3 electroless nickel plated
Seal:	FKM (EPDM seals - CT models only. Consult sales office).
IP Rating:	IP66 (EN60529) *With cable connected
Power Supply:	8-40 Vdc
Response Time:	50 ms

CAN-open Functionality

All the CAN sensors listed above are CAN-open compliant and can be used by integrators in CAN bus applications. The sensors digitise the physical quantity and make the value available on the CAN bus. They can sample at various rates, apply filtering and scale the measurements appropriately.

The sensors implement the CAN2.0B standard and can transmit at rates up to 1Mbits/s with 11 or 29 bit identifiers. The physical layer of the 2-wire interface is specified according to ISO 11898. The bus termination resistor is not included in the device.

The CAN protocol complies with the CAN-open specification DS301 and CAN-open device profile DS404. Possible configurations can be set with the object dictionary. Heartbeat and emergency messages can be used to monitor the status of the sensor.

CAN Supply

Voltage: 8-40VDC, protected against reverse polarity
Current: Pressure, temperature <10mA
 Flow 25mA

CAN Interface

Physical layer: 2-wire interface, 5 V level according to ISO 11898, protected against short-circuit
Max. Bitrate: 1 Mbit/sec
Bus termination: External (120Ω) at last node
Protocol: CAN-open DS301, Device Profile DS404

Connecting Details

	ASSIGNMENT
1	CAN shield, PE
2	+ UB, +24 VDC
3	GND, 0V
4	CAN_H, CAN+
5	CAN_L, CAN-

CAN-Open Summary

The measured data can be extracted from the sensor in one of two formats: process value or field value.

Process value is a 32bit floating point number (little endian) to IEEE-754-Format. It is formatted and scaled in the appropriate sensor units, ie. bar, lpm, usgpm, etc.

Field value is a 16bit integer (± 32000) representing the linear gradient of the sensor value. This must be converted to a process value based on the sensor type and range by the user. It has the advantage of producing less bus traffic but must be configured at every power up.

CAN-open type:	NMT Slave
Network bootup:	Minimum bootup
COB-ID placing:	Pre-defined connection set, SDO
Node id:	Object (specific entry)
Bitrate:	Object (specific entry)
Number of PDOs:	PDO1, PDO5, PDO6 & PDO7
Emergency message:	Supported

Heartbeat:	Supported
Device profile:	CiA DS404
Default settings:	Bitrate 500 kbit/s NodeID 78 hex (may vary) Process value automatically transmits at the set rate after power on.

Full data sheets are available on request from Webtec sales.

Electronic Data Sheets (EDS) created with the CAN-open Design Tool v2.2.42.0. are also available.
